INSPIRATION

Some days there was a particularly impressive atmosphere. I try to remember the day light during lived here. one day, the light reflected through the window was so beautiful. This light gave a feeling of orange and blue blending. When I opened the window and looked outside, it was glowing. I missed this moment while watched the sunset. I wanted to bring that light into my room. Before the sun goes down. I thought about bringing the moment. I stretched out my hand and grabbed the light. It was kind of torch flashed. In ancient times, human brought a fire in the cave and made it bright. It was a small sun for cave people. Life after the sunset was the end of the day, but the fire made new journey for human society at night. The fire was transmitted through the torch. I want to use this light in my room now. Digital Fire. Illuminate this place with light.
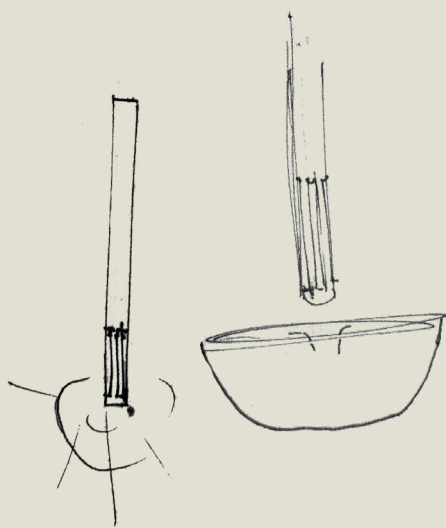

Hold the torch and turn it light. There are two functions of traditional torch. It is fire and light. Focusing on light, it is used to illuminate a dark house. When you enter the house at night, only the torch is shining brightly in the dark room. Take this and browse the room to find a place to put bonfires. There has a hall for the lighting start. If you can find it, put the torch and spread light in this dark place.
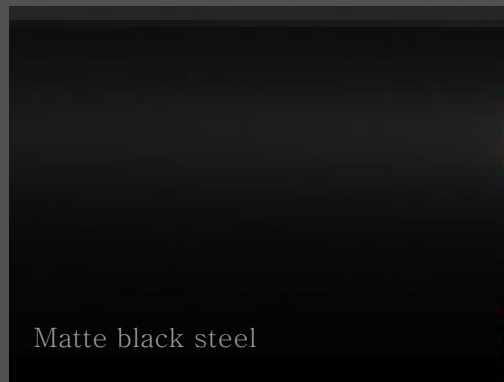

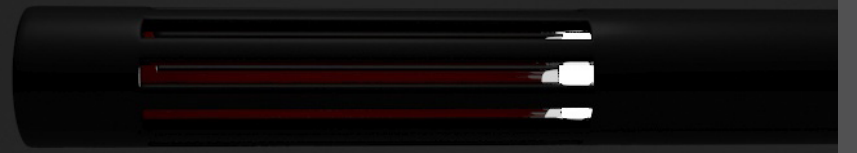

The torch has an important symbolic element, not only functional stuff. It gives an atmosphere of exploration and mystery. Every time I visit always the same my room, I want to feel like having a different expedition. Also, changed the light switch system. Light will be wake up the room. Somewhat discomfort is a stimulus that reminds the meaning of life.
